Shawn Meister

FULL-STACK DEVELOPER

Fredericton, NB, Canada | ss.meister@hotmail.com | fullstackchef.dev | github.com/CookingMeister | linkedin.com/in/shawn-meister

SUMMARY

Developer working on language runtime internals and on the applications built on top of them. I extend the PL/B runtime in C and C++, and modernize long-running systems in PHP and JavaScript - three client sites delivered end to end on Azure and IIS 10. Most recently wrote a regular expression engine from scratch in C. Outside work I run a Kubernetes cluster on Talos Linux delivered by GitOps.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), PHP, C and C++, PL/B and Visual PL/B, SQL, HTML and CSS, YAML
Web	Vue 3 and Vue Router, React, Node, Express, REST, GraphQL, Bootstrap, Tailwind
Cloud	Azure, IIS 10, Cloudflare, Netlify, Render, AWS EC2
Infra	Kubernetes, Talos Linux, Sidero Omni, Flux CD (GitOps), Cilium, Traefik, SOPS and age, Renovate, Proxmox VE, Docker, Podman and Compose, TrueNAS CE, OPNsense
Databases	MySQL, PostgreSQL, MongoDB, SQLite
Tooling	Git with GitHub and GitLab, CI/CD pipelines, Vite, Vitest and Jest, Postman, Linux, Bash, PowerShell
AI	Ollama and OpenWebUI for locally hosted models, Claude, ChatGPT

EXPERIENCE

Software Developer 06/2024 - Present

Sunbelt Computer Software - Remote

- Build features into the PL/B language runtime, a long-lived C and C++ codebase, where every change is inherited by all applications written in the language.
- Wrote a regular expression engine from scratch in C for that runtime, supporting grouping, backtracking and replacement - a lighter alternative to PCRE2 for an environment PCRE2 could not serve.
- Delivered three legacy site modernizations end to end: rewrites, refactors and ground-up builds to client specification, migrating long-running code to modern standards on Azure and IIS 10, with responsive and cross-browser retrofits.

Executive Chef 04/2015 - 09/2023

The Palate Restaurant - Fredericton, NB

- Led and mentored a full kitchen staff, holding turnover low in critical positions, and grew revenue to $1.1 million through menu engineering driven by market research.
- Owned food and labour cost control, inventory systems and vendor coordination against a fixed budget.

SELECTED PROJECTS

PL/B Regex Engine C, parsing, backtracking

Written from scratch in C for the PL/B runtime. Lighter than PCRE2, still supporting grouping, backtracking and replacement. Closed source.

OpenAI Chat App Vue 3, Vite, Express

Text and image chat client for the OpenAI API; an Express backend keeps the API key server-side. github.com/CookingMeister/openai-vue-app

Sunbelt Computer Software Website Web design

Redesign of the PL/B language company's website, sunbelt-plb.net

Talos Kubernetes Homelab Kubernetes, Flux CD, Cilium

Three-node Talos cluster on Proxmox VE. github.com/CookingMeister/homelab-omni-proxmox

HOMELAB AND INFRASTRUCTURE

- Proxmox VE with TrueNAS CE storage, OPNsense routing, self-hosted DNS and DHCP, and local AI with Ollama and OpenWebUI.

EDUCATION

Certificate, Full Stack Web Development 2024

University of New Brunswick / edX - Fredericton, NB. Graduated top performer, 96%.

Bachelor of Arts, Psychology and Philosophy 2002

University of New Brunswick - Fredericton, NB

Canadian citizen, eligible for projects requiring higher levels of security clearance.
